## Example Ad

- The maximum length of the job listing is 200 characters
- The provided text should be in English
- exact colors, font sizes, margins and text may differ

### Using ruby parser and AST tree to find deprecated syntax

by Robert Pankowcki • December 22, 2017

Sometimes when doing large refactoring or upgrades we would like to find places in the code for which `grep` or `Rubymine` search is not good enough. These are usually cases where you would like to use something more powerful. And we can do that.

I am upgrading this old app to Rails 4.1 and the [official guide mentions this case](#):

Previously, Rails allowed inline callback blocks to use `return` this way:

```
class Model < ActiveRecord::Base
  before_save { return false }
```
